

ZZR600 HUGGER

Fitting kit:

1 x Bracket
4 x M6 x16mm button allen bolt
4 x M6 nylon washer
4 x M6 s/steel washer

Fitting instructions:

The hugger can be fitted without removing the wheel if care is taken to ease the front of the chain guard under the inner bodywork. However, if the wheel spindle is removed and the wheel allowed to drop down (it is not necessary to completely remove the wheel) positioning the hugger is much easier.

Chain side: remove the chain guard.

Brake side: remove the nuts and washers from both ends of the brake torque arm.
Slip the bracket over the bolts (tabs upwards and inwards).
Replace the washers and nuts.

Position the hugger over the wheel and secure at the original chain guard mounts and the two bracket mounts using the four bolts with s/steel and nylon washers supplied.
Check alignment before fully tightening all fasteners.

Clearance between the hugger and the inner body panels is minimal. Please adjust suspension to compensate for passengers/heavy loads to reduce risk of contact.

Please note: check hugger alignment and fasteners periodically.
