

## **CBF600/1000 SEAT COWL**

- 1) Remove the rear seat with the key.
- 2) Push the rubber trim onto the front edge of the seat cowl and then carefully slide the cowl onto the seat. Make sure you check the rubber trim stays in place as the cowl is slid on by gently pressing the seat cushion down at the same time. If there is strong resistance don't force it on, remove the seat cowl and adjust the soft metal tabs to give more clearance. Do not overbend the tabs, once adjusted and fitted the seat cowl can be slid on and off without alteration.
- 3) Refit the seat with the seat cowl and lock into place.
