FITTING INSTRUCTIONS for...HONDA CRF 1000L AFRICA TWIN -DCT & non DCT ('16 on)

Preparation

- Remove original factory handguard components if installed. Reattach the original screws with the flanged spaces and nuts to the handlebar. Tighten the original screws to the manufacturer's specified torque.
- Remove original external handlebar end weights and metal clips. **NOTE:** Retain internal handlebar weights.

IMPORTANT: Right Side clearance of 5mm required.

Fitting Procedure

- Fit Threaded Insert (8) and tighten to specified torque setting.
- Loosely assemble clamp (2/3) to handlebar and attach backbone with applicable parts as per diagram. Washer (10) on the RIGHT side only, between the Threaded Insert (8) and Bar End Weight (9).
- Tighten all bolts in the following order (7), (6), (4) then (5). **Note:** The preferred backbone position is horizontal when viewed from side.
- Use recommended torque specifications over page.

DCT model ONLY:

- Loosen cable adjuster a few turns.
- Remove original screw from the parking brake lock.
- Mount Pressed Metal Bracket (12) between the brake lever and parking brake sensor along with Bolt (11) and Nut (13) as shown, then tighten.
- Set brake cable adjuster to desired position and secure.

IMPORTANT:

Position bracket (12) as shown in picture before tightening.
 ← see image
 Check the bracket makes contact with the sensor. Slight repositioning of the sensor may also be necessary.

1 Aluminium Bar

PN: BAR-V-036
Pcs. 2 (L & R)

2 Clamp Frame & Saddle (left)

PN: CFS-ADV-L
Pcs. 1

3 Clamp Frame & Saddle (right)

PN: CFS-ADV-R
Pcs. 1

4 Button Head Bolt 30mm

PN: M6x30BHCSZP
Pcs. 2

5 Button Head Bolt 20mm

PN: M6x20BHCSZP
Pcs. 2

6 Flat Head Bolt 20mm

PN: M8x20FHCSZP
Pcs. 2

7 Flat Head Bolt 40mm

PN: M8x40FHCSZP
Pcs. 2

8 Threaded Insert

PN: BESF4
Pcs. 2

9 Bar End Weight

PN: BEW35
Pcs. 2

10 M8 Flat Washer

PN: M8FW
Pcs. 1

11 Shoulder Bolt 30mm

PN: M6x30SB
Pcs. 1

12 Pressed Metal Bracket

PN: BPM1
Pcs. 1

13 Nylock Nut 6mm

PN: M6LN
Pcs. 1

Guard options sold separately

JET JET-003
VPS VPS-003
Storm STM-003
CARBON BCF-003

Recommended Torque Settings	
M6	10 Nm (7.4 lbf ft)
M8	20 Nm (14.8 lbf ft)
M18 (item 8)	21Nm (15.5 lbf ft)

NOTE:
Part Numbers 11, 12 & 13 ONLY required for DCT models.

CAUTION:
Installation of the handguard is safety-relevant work and can be complicated. We recommend the installation be performed by a motorcycle service technician. Rideworx accepts no liability for damages caused by improper mounting. All screws, bolts and nuts, including all replacement hardware provided by Rideworx, should be tightened to the torque specified in the table. After the first 50km of riding check all screws, bolts and nuts are tightened to the correct torque. We recommend a medium strength liquid thread lock product on all fasteners.

WARNING:
Check operation of all handlebar controls, specifically the throttle, front brake, kill switch and clutch to ensure they are operating correctly and are in accordance with the OEM specifications. Do not ride the motorcycle if any controls are not operating correctly or if rear view mirror vision is obscured. Check periodically that all bolts are tight.

Disclaimer:
A failure to follow these fitting instructions could cause serious injury, death or property damage. These handguards are intended solely for use with motorcycles/ATV/snowmobiles/scooters that have not been modified. They are not designed to prevent injury or death while riding or in an accident or crash. The user must ensure that all controls are free of the handguards every time that they ride. By installing and/or using this product you acknowledge that you accept these terms and have followed the fitting instructions.

FITTING GUIDE Universal BBZ Fabric Guards

“built for BLIZZARD conditions”

FITTING TIPS

- The Barkbusters BBZ fabric handguard is designed to flex around the windscreen / fairing if it makes contact when the steering is at full lock.
- **Closed Grip Preparation:**
If the handlebar grips are not open at the end they will need to be cut open for the guard to be installed. Use a sharp knife to cut a hole in the end of each handgrip. On the right side the hole size should be neat and no smaller than the inside diameter of the throttle tube. Loosen the throttle assembly to move it outward about 20mm. Roll back the end of the grip and use a hacksaw to carefully cut off the end cap of the plastic throttle tube. Do not remove more than 3mm and take care not to cut the underlying handlebar. Before refitting, remove any burrs that could restrict throttle movement.
- **Installation over Two Point Mount Aluminium Backbone** (sold separately):
Remove backbone from handlebar and remove plastic guard from backbone, if installed. Insert appropriate length bolt through collar (2), BBZ Guard (1) and outer end of backbone. Fit expander parts and insert into handlebar or attach to threaded bar end, as required: (spacers and aluminium plate not required). Re-install backbone and tighten bolts. Secure strap.
- **Honda models with rotating bar weight.**
The bar weight on many Honda models can rotate. If you experience rotation (up and down) of the handguard we recommend removal of the weight and internal handlebar parts to create a hollow handlebar. After the below removal procedure has been performed the guard can be installed using the hollow handlebar installation procedure.
Left side, roll back hand grip and depress the two retaining clips through the holes in the handlebar with a screwdriver. There is one top and one bottom. To access holes on right side, unscrew throttle housing and separate the two halves enough to slide the twist grip in from the end. Leave handlebar weight connected to the internal weight to help with removing the internal parts. Pull on weight while pressing clips through hole. See pictures below.

NOTE:

Installation of the handguard is safety-relevant work and can be complicated. We recommend the installation be performed by a motorcycle service technician.

WARNING:

Check operation of all handlebar controls, specifically the throttle, front brake, kill switch and clutch to ensure they are operating correctly and are in accordance with the OEM specifications. This check should be performed with the steering straight and also when it is at left and right full lock. If the lever end touches the guard extra spacers may be required at the handlebar end mounting point. On some motorcycles the guard may touch near the levers pivot point and hinder its function. If this occurs reposition the handguard to avoid interference. Do not ride the motorcycle with the guards installed if any controls are not operating correctly. Check periodically that all bolts are tight.

CAUTION:

Rideworx accepts no liability for damages caused by improper mounting. All bolts including all provided by Rideworx, should be tightened to the torque settings recommended by your motorcycle's manufacturer. If unavailable, use torque settings in the table provided. After the first 50km of riding check all bolts are tightened to the correct torque. We recommend a medium strength liquid thread lock product on all fasteners.

Recommended Torque Settings	
M5	6 Nm (4.4 lbf ft)
M6	10 Nm (7.4 lbf ft)
M8	20 Nm (14.8 lbf ft)
